

Cynqra Company Canon

The Cynqra Company Canon, v0.1. This is the single source of truth for Cynqra. If a question cannot be answered from these five books, that is a gap in the canon. Log it in the Decision Log in Book 4 and close the gap.

What this is

We write Cynqra down as a canon: one doctrine plus four execution books, not one giant document. Each book has one job, one owner, and answers one category of question.

The five books

Book	Answers	Owner
Book 0: Doctrine	Why we exist and what we are	CEO (founder)
Book 1: Product	What we build first, precisely, and how we know it works	CPO
Book 2: Engineering	How we build it: decisions, schemas, contracts, security	CTO
Book 3: Operations	How the company runs: failures, liability, money, compliance	COO
Book 4: Company	Who we hire, what the next 90 days look like, and what we have decided	CEO

Reading order

1. Every new hire reads Book 0 first, end to end. No exceptions.

2. Then their own book: engineers read Book 2, product reads Book 1, operations reads Book 3.
3. Book 4 is shared context. It holds the team plan and the Decision Log that governs all the books.

Canon rules

- Book 0 changes rarely. It is doctrine. Changing it takes a founder decision, recorded in the Decision Log.
- Books 1 to 4 change constantly. Every change is versioned and dated at the bottom of the book.
- No orphan decisions. If a decision contradicts a book, we either update the book or reject the decision.
- The canon is the onboarding. If a new hire is confused after reading it, the canon is wrong. Fix the canon, not the hire.

The books

The five books live below, in order.

Book 0: Doctrine

Book 1: Product (MVP Spec)

Book 2: Engineering and Architecture

Book 3: Operations

Book 4: Company and Execution Plan

Cynqra Company Canon — Governance Addendum v0.2

The five-book Canon remains the single source of truth.

Purpose: define how the existing Canon becomes implementation-complete without creating a sixth book or silently deciding founder-level questions.

Canon governance amendment v0.2

The five-book structure remains unchanged. Book 0 defines doctrine and concepts. Book 1 defines MVP scope and acceptance. Book 2 defines executable engineering contracts. Book 3 defines operational behavior, liability posture, economics and compliance. Book 4 records consequential decisions and execution.

A new rule is added: where Book 0 defines a concept and an execution book defines its implementation, the execution book may make the implementation precise but may not redefine the concept. A contradiction requires a Book 4 decision or, if doctrine changes, a founder decision recorded in Book 4.

The hardening addenda are not a sixth book and are not a substitute for Book 4 decisions. Once ratified, their approved contents are folded into the relevant book versions.

Production readiness definition

Cynqra documentation is considered production-build complete when a competent product/engineering/operations team can implement the defined MVP without inventing product behavior, authority rules, core schemas, lifecycle semantics, security controls, verification behavior, deployment behavior, data boundaries, or operational response.

Normal engineering implementation choices remain outside the Canon unless they materially change product behavior, security posture, governance, cost constraints or portability.

Finalization sequence

- CEO ratifies or rejects D-17 and the other founder-level proposed decisions.
- CTO ratifies the Book 2 contracts and records exact technology choices separately as implementation decisions.
- COO/counsel resolve D-22 and customer-facing legal/data commitments before first paying customer.
- CPO resolves the existing Book 1 product open questions that affect implementation; pricing remains deferred if cost data is not yet available.
- Fold approved changes into Book 1–4 versioned documents.
- Run Canon CI and a final cross-book traceability review.
- Run the Wizard of Oz and M1 spikes before treating the architecture as empirically validated.
